

MiChroSat Voice

Temporary IRIDIUM Handset

Product Highlights

- Full Iridium Voice functionality
- SMS
- Low cost alternative to Iridium handset
- Ideal for on-site communications

Overview

As the cost of installation increases and with the increasing pressure to provide lone worker support on remote sites, the MiChroSat Voice add-on removes the cost of ownership of a dedicated Iridium handset.

MiChroSat Voice allows workers to simply plug a handset into any compatible MiChroSat 2403 units deployed in the field to provide temporary voice and SMS capabilities on site.

The capability to add MiChroSat Voice to a MiChroSat 2403 device must be requested upon unit order. Additional line rental charges may be incurred.

The Handset itself can be plugged into any voice enabled MiChroSat 2403. The telephone number and services are linked to the MiChroSat 2403 unit itself not the handset. This allows the handset to be provided to all workers regardless of location.

Voice minutes will be billed on an “as required” basis allowing complete flexibility of use.
